

A SYSTEM, METHOD AND ARTICLE OF MANUFACTURE FOR COUNTRY AND REGIONAL TREATMENT IN A SUPPLY CHAIN SYSTEM

ABSTRACT OF THE INVENTION

A system, method, and article of manufacture are provided for handling supply chain data in different locations. First, data relating to a supply chain is received from a first location utilizing a network. Such data is maintained in accordance with a first set of rules associated with the first location. Further, the data is received at a second location utilizing the network. In operation, the data is translated in accordance with a second set of rules associated with the second location.
